GARAGE DOORS RESIDENTIAL BROCHURE

WELL DESIGNED
EASY TO CUSTOMIZE
QUICK TO INSTALL

A door for every style!

Thickness and insulation

1 3/8 Doors (R-12 Insulation): A more economical option, suitable for garages requiring less insulation.

1 3/4 Doors (R-16 Insulation): More popular, perfectly designed for Canadian winters.

Fully Glazed 1 3/4 Doors: Panoramic (Without Insulation).

Coating materials

Standard Galvanized Steel (26 ga): The most popular and robust and choice.

Aluminum (23 ga): Known for its lightweight properties.

Heavy-Duty Galvanized Steel (20 ga): Sturdy steel option for a smooth finish (Quantum).

Aluminum for Fully Glazed Doors.

Strong and durable

Garex garage doors are designed to provide robust protection against weather conditions through the use of high-quality materials. Their efficient insulation helps maintain optimal energy efficiency in your home. Choose the strength of our garage doors for a lasting and secure investment, ensuring peace of mind and longevity.

Garex: Innovation at the heart of excellence

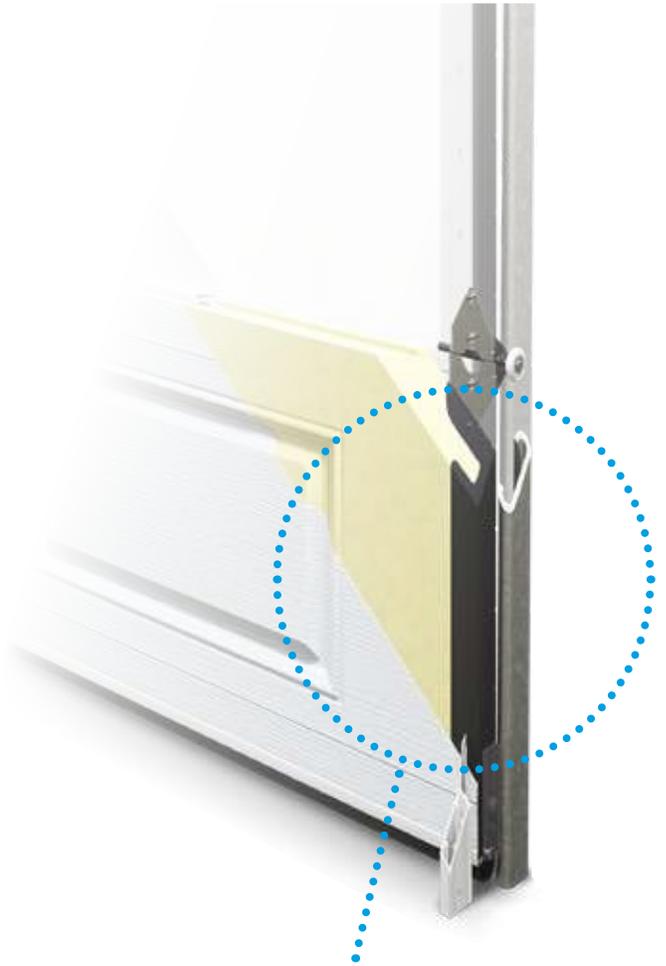

Composite end blocks

Exclusive to Garex, our garage doors are designed with composite end blocks made from 100% recycled materials, **ensuring mildew and moisture resistance** while offering a **true thermal break**. The ability to design and manufacture these end blocks according to a precise profile allows for the integration of a groove, promoting a better bond between the end block and the expanded polyurethane while maximizing the contact surface between the cladding and the insulation.

Our composite end blocks are just one of the ways we're committed to providing you with durable, sturdy doors for many years to come.

Recognized by the industry

As soon as they were introduced to the market in 2015, our end blocks attracted a lot of attention. The Contech Building jury, a leading figure in the construction industry, selected our product as one of its top 5 favorites out of the 25 innovations presented. This recognition attests to our commitment to excellence and our determination to offer unmatched quality products.

Composite end blocks, exclusive to Garex.

Well designed

The starting point for good design is the choice of materials. Metals are first extracted from Canadian mines, then transformed into coils before being delivered to our factories to manufacture panel coverings.

In our two production facilities, we have presses that enable us to create a variety of panel designs from which our customers can make their selection. Each panel is then reinforced, assembled, and sealed using our exclusive Garex composite end blocks. Finally, the panels are injected with polyurethane to ensure optimal insulation and structural rigidity.

Easy to customize

Our customers can not only choose the size and color of their garage door, but also customize many other aspects, such as the windows, by choosing window designs patterns, layout and type of glass.

Quick to install

To ensure the most efficient installation, each garage door is delivered with premium tracks, custom-designed springs, the necessary installation hardware, and weatherstripping specially adapted to the model you've chosen.
